

Professional Summary:

Software Engineer with 5 years of experience designing and delivering backend systems, enterprise applications, and data-driven solutions across financial, healthcare, and SAP enterprise environments. Strong expertise in Java/Spring Boot, C#/.NET, SAP ABAP, RESTful APIs, microservices architecture, and SQL optimisation. Experienced in building scalable backend services, secure integrations, and production-grade systems in regulated environments. Strong exposure to data analytics, machine learning (academic projects), and cloud platforms (AWS, GCP) with CI/CD practices and Agile delivery. Proven ability to collaborate in global teams, mentor engineers, and support production systems.

Technical Skills:

Programming Languages: Java, C#, Python, JavaScript, HTML, CSS, OOP

Backend Development: Spring Boot, Spring MVC, .NET Framework, REST APIs, Microservices Architecture

Databases & Data: SQL Server, MongoDB Relational Database Design, Query Optimisation, Data Mapping

Cloud & DevOps (Exposure): AWS (Lambda, S3, RDS), GCP (Cloud Run, Cloud SQL, Compute Engine), Docker, Kubernetes, CI/CD (Git-based pipelines)

Enterprise Systems: SAP ABAP, RICEF Objects, Reports, Interfaces, Enhancements, BAPIs, IDocs, RFCs

Testing & SDLC: JUnit, Integration Testing, TDD, Code Reviews, Agile/Scrum, Release Management

Analytics & AI: Python, R, Machine Learning, NLP, Predictive Modelling, Data Mining, SPSS, STATA, Power BI

Work Experience:

Development Team Member | Synergi Design

Birmingham, UK, July 2024 – present

- Designed, developed, and maintained full-stack web and mobile applications for healthcare audit systems using C#, Java, JavaScript, and SQL.
- Built and enhanced backend services and RESTful APIs to support scalable and secure healthcare applications used for compliance and quality management.
- Developed interactive dashboards and data visualizations using Power BI and Excel to provide actionable insights for healthcare providers, supporting NHS compliance reporting.
- Worked closely with cross-functional teams including QA, design, and product teams to deliver high-quality features aligned with business and regulatory requirements.
- Performed end-to-end testing, debugging, and deployment of application features from development to production environments.
- Improved system usability by enhancing UI components and workflows, increasing adoption among healthcare clients.
- Implemented secure data handling practices including encryption to ensure protection of sensitive healthcare information.
- Participated in production support, issue resolution, and root cause analysis to maintain system reliability.

Senior System Engineer | Infosys Limited

Bangalore, India, July 2021 - December 2023

- Developed and maintained SAP ABAP-based enterprise applications within highly regulated, production-critical environments.
- Delivered 30+ RICEF objects (Reports, Interfaces, Conversions, Enhancements, Forms), ensuring compliance with strict SDLC and audit standards.
- Designed and implemented ABAP reports, enhancements, and interfaces for reliable cross-system business data exchange.
- Optimised ABAP code and SQL queries to improve performance of high-volume transactional and reporting processes.
- Performed unit testing, regression testing, and supported UAT cycles for SAP deliverables.

- Supported production releases, transport management, and post-deployment validation in controlled enterprise environments.
- Provided L2/L3 production support, resolving critical incidents and ensuring system stability.
- Collaborated with global business and technical teams to translate requirements into SAP technical solutions.
- Mentored junior developers on ABAP development standards, debugging techniques, and performance optimisation.

Programmer Analyst | FinAGG Technologies Pvt Ltd *Chennai, India, January 2021 - July 2021*

- Built Java Spring Boot REST APIs supporting SME loan calculations for 10,000+ active users.
- Designed secure, transactional backend workflows with strong validation and error handling.
- Supported backend services for financial reporting and operational dashboards.
- Implemented automated email and SMS notification services, improving operational efficiency.

Projects / AI & Software Projects

ClipsIQ – YouTube Video Insight & Summary Generator (AI Web App) | Portfolio

- Built an AI-powered web application that converts YouTube videos into structured summaries, key insights, and actionable takeaways using a custom backend API.
- Developed a real-time video processing pipeline to extract and analyze video content, generating key topics, sentiment insights, and structured summaries within seconds.
- Implemented export functionality enabling users to download AI-generated reports in PDF and Word formats, improving usability and knowledge retention.

Academic Projects:

Customer Service Performance Evaluation (Dissertation Project)

- Analyzed 85,000+ customer records to identify key drivers of CSAT using predictive models (Logistic Regression, Random Forest, XGBoost).
- Applied customer segmentation and NLP-based sentiment analysis to uncover behavioral patterns.
- Delivered insights that informed customer experience and retention strategies, achieving 90% model accuracy.

Accident Severity Prediction using Machine Learning

- Built predictive models on 100K+ records to assess accident severity and risk exposure, applying machine learning techniques with end-to-end data preprocessing including data cleaning, feature engineering, and exploratory data analysis to improve data quality and model performance.
- Identified key risk drivers from model outputs and translated results into actionable, business-focused insights to support insurance decision-making.

Achievements:

- Winner of Aston Global Advantage Competition conducted at Aston University, securing an internship at St. Basils
- Winner of Future Tech Pitch at Birmingham Tech Week and secured a cash prize.
- Participated in Tractor Design Competition, which was conducted by SAEISS (Society of Automotive Engineers Association).

Education:

Master of Science in Business Analytics | Aston University *Birmingham, UK Jan 2024 - Jan 2025*

Grade: Merit

Relevant Modules: Big data for decision making, Performance Analytics, Software Analytics, Data Mining and Web Analytics, Descriptive Analytics, and Effective Management Consultancy

Bachelor's in Automobile Engineering | Anna University - MIT Campus, India *Aug 2016 - Sep 2020*

Grade: First Class

Relevant Modules: Industrial Automation Systems, Introduction to Internet of Things, Computing Techniques
